**THE FCC CAP ORDER ALLOWS A LIMITED EXEMPTION FOR AN ETC
WHICH FILES COST BASED SUPPORT DATA.**

On May 1st, 2008 the Commission released an Order¹ freezing, by state, the amount of funding that could be obtained by Competitive Eligible Telecommunications Carriers (“ETCs”). The Order explained how annual support for competitive ETCs in each state will be capped at the level of support that competitive ETCs in that state were eligible to receive during March 2008, on an annualized basis.

The Order allowed for two limited exceptions to the fund cap.

“We adopt two limited exceptions to the operation of the interim cap. First, consistent with the ALLTEL-Atlantic Order and the AT&T-Dobson Order, we find it in the public interest to adopt a limited exception to the interim cap if a competitive ETC submits its own costs. Specifically, a competitive ETC will not be subject to the interim cap to the extent that it files cost data demonstrating that its costs meet the support threshold in the same manner as the incumbent LEC.

Second, we also adopt a limited exception to the interim cap for competitive ETCs that serve tribal lands or Alaska Native regions (the Covered Locations). We permit competitive ETCs serving Covered Locations to continue to receive

¹ See in the Matter of High-Cost Universal Service Support, Federal-State Joint Board on Universal Service, Alltel Communications, Inc., et al. Petitions for Designation as Eligible Telecommunications Carriers, RCC Minnesota, Inc. and RCC Atlantic, Inc. New Hampshire ETC Designation Amendment, Order (“FCC Cap Order”), WC Docket No. 05-337 and CC Docket No. 96-45, released May 1, 2008.

*uncapped high-cost support for lines served in those Covered Locations. Because many tribal lands have low penetration rates for basic telephone service, we do not believe that competitive ETCs are merely providing complementary services in most tribal lands, as they do generally.”*²

With this filing, San Isabel Telecom, Inc. (San Isabel) is submitting a cost study that complies with the first exception in the FCC Cap Order. San Isabel is a provider of telecommunications services in the Vail Valley of Colorado. The service area covers territory that is in two Incumbent LECs study areas. San Isabel has been certified as an Eligible Telecommunication Provider (ETC) in the portion of the service area where Century Telephone Company is the Incumbent LEC. The cost study provided with this submission covers only the service area where San Isabel has been designated an ETC. In 2008 San Isabel received \$89,839 in support under the identical support rule. The 2008 cost data as shown in the cost study San Isabel is submitting shows that San Isabel should receive \$764,658 in high cost support for the high cost, low density areas that it serves. This cost-based support level was calculated using the same High Cost Loop (HCL) model and Local Switching Support (LSS) model as used by rural incumbent LECs and the ICLS support was calculated using the methodology submitted by GVNW Consulting in an Ex parte filing³ on August 8th, 2008 in WC Docket No. 05-337 and CC Docket No. 96-45.

² Id. Para 31-32

³ GVNW Consulting, August 8th, 2008 Ex Parte filing in WC Docket No. 05-337 and CC Docket No. 96-45

COST METHODOLOGY

As a wireline CLEC, San Isabel used the existing models for computing the HCL support and the LSS support. For ICLS, the company used the alternative methodology submitted as part of the WiPan Costing Methodology applicable to wireless ETCs. The model calculates an equivalent Interstate Common Line Support (ICLS) in order to allow the company to receive support applicable to recovery of common line costs. This amount is similar to that received by ILECs that was a replacement for funding previously provided by interstate access revenue. In order to avoid requiring CETCs to complete a full "Part 36/69 cost study" process, WiPan developed a methodology patterned after the existing ILEC ICLS support mechanism. As shown in the attachment, the model employs a calculation that uses as its foundation the unseparated loop cost and then requires no additional inputs other than those already required for the loop cost support calculation or data that is publicly available. Based on the loop costs calculated in the HCL model and common line revenue levels similar to those applicable to ILECs, San Isabel's equivalent ICLS is \$187,972.

SUMMARY OF RESULTS FOR ALL THREE HIGH COST MECHANISMS FOR SAN ISABEL

The attached cost summaries, in compliance with the FCC's Cap Order, demonstrate that the annual universal service support amount of \$764,658 is required for San Isabel to provide the required universal services in the high cost and low customer density areas where San Isabel has been designated as an ETC in Colorado. As discussed previously, this total cost based support is composed of:

- High Cost Loop Support - \$465,399 (Attachment A)
- Local Switching Support - \$111,287 (Attachment B)
- ICLS - \$187,972 (Attachment C)
- Total Cost Based Support- \$764,658

RELIEF REQUESTED BY SAN ISABEL

San Isabel has fulfilled the requirements of the exception to the Commission's CETC universal service support Cap Order by performing the attached cost analysis demonstrating that its costs meet the universal service support threshold in the same manner as ILECs. Based on the cost information submitted herein, San Isabel requests that the Commission direct USAC to begin distributing the required \$764,658 in cost based support, as summarized above, annually to San Isabel immediately.
